Motivation

After several years of experience in various sectors, I have finally found a career path where I can fully thrive and develop my potential. Following a rewarding internship at Infrabel, I joined the automation department, where I have been working for the past two years. Today, I am eager to explore new opportunities beyond the railway industry and apply my skills to different horizons.

Goal

Following my training at Interface 3, I am now seeking opportunities to collaborate on projects as a junior back-end, full-stack, or front-end developer.
I am available to start working within the next three months and plan to continue my second year of a bachelor's program in evening classes starting in 2025.
I am eager to apply my skills and knowledge to meaningful and innovative initiatives while successfully balancing my professional and academic commitments.
